

Figure 2: The effect of 3 minutes pretreatment of CPZ on 100mMK⁺-responses of locust foregut (·) and hindgut () muscles. The responses are plotted as a percentage of a control 100mMK⁺-responses. Each point represents the mean ± S.E. n = 8 .

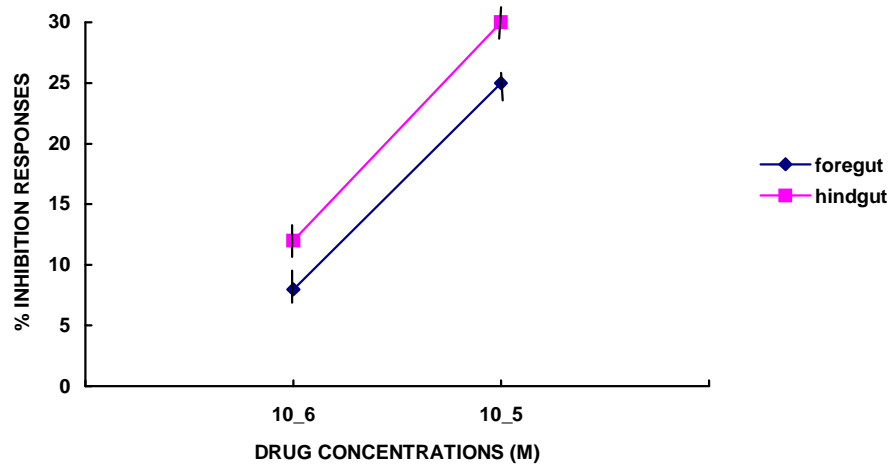

FIGURE 4: The effect of CPZ on FS-responses of locust foregut (·) and hindgut (□) muscles. The responses are plotted as a percentage of a control response. Each point represents the mean ± S.E. n = 8.

Figure 2: The effect of a 3 minutes pretreatment of CPZ on 100mMK-responses of locust foregut (o) and hindgut (□) muscles. The responses are plotted as a percentage of a control 100mMK-responses. Each point represents the mean \pm S.E. n = 8
